

WP 1 Leader, Anneli Kakko

M.Sc. (Physics)

I am a Senior Lecturer in Physics and a Developer of International Activities at the School of Technology in JAMK University of Applied Sciences, Jyväskylä, Finland. I have worked at JAMK for nearly three decades. During those years I have done a lot of cooperation with universities and companies both in Finland and abroad.

In the past I have taken part in EU projects as a partner. As for RePCI, it was the first EU project in which I had management responsibilities and I coordinated the Work Package 1, Management.

It was an honor for me to work with such motivated and skilled partners from four European countries. At first we were like a normal group of partners but towards the end of the project we became very close – a big family, I might say. I am really happy about that we achieved all the professional, educational and international goals set for our project well and about that the cooperation with all partner universities and companies will continue after the project. I'm also glad about that all the partners found new cooperation partners during the project, thus helping us disseminate the outcomes of the project.

I want to sincerely thank everyone with whom I had possibility to meet, discuss and work during the RePCI project. I am looking forward to future collaboration with everyone involved in the RePCI project.
