

WP 8 Leader, Ciprian LAPUSAN

Phd. Eng. (Mechanical Engineering)

I am Lecturer, Department of Mechatronics and Machine Dynamics at the Technical University of Cluj-Napoca.

In RePCi project I coordinated the Work Package 8 – Exploitation of Results. The activities from WP 8 aimed to ensure the sustainability of RePCI project results as well enlargement of partnership to new companies.

For me, the activities developed during the project implementation facilitated a better understanding of the solutions and opportunities for increasing to a new level the cooperation between HEIs and industry. The novel partnership model proposed in RePCI facilitates the development of strategic partnerships between the involved parties that allow better response to the new challenges that we all faced in the highly competitive globalized market.
