

WP 5 Leader, Horst Haberhauer

Prof. Dr.-Ing. (Mechanical Engineering)

I am professor at the Hochschule Esslingen - University of Applied Sciences. In the past I have worked at Daimler, Bosch and Festo.

In RePCI project I was responsible for the Work Package 5 Real Life Problem Solving. Target was the implementation of real projects in collaboration with universities and companies.

To work in real projects with partners from different countries was very interesting. Besides different working environments in other countries we learnt a lot of local culture, too. So the real life problem solving projects could open doors for manifold kinds of cooperation between universities and companies in different countries.
